Allowable Subject Matter

- 1. Claims 1-9, 11-29, 31-43 and 47-67 are allowed.
- 2. The following is an examiner's statement of reasons for allowance.

In claim 1 applicant has claimed a synthesis reaction tool comprised of the following elements: a plurality of reaction vessels adapted for chemical synthesis; a reaction vessel support disposed to hold the reaction vessels; a plurality of injection ports, each port including a pressure seal and each port operable for the injection of liquids; a plurality of evacuation ports, each evacuation port including a pressure seal and each evacuation port operable for the evacuation of liquids; a plurality of injection fittings and evacuation fittings formed to matingly engage respective injection and evacuation ports to enable simultaneous delivery of fluids to the reaction vessels or simultaneous; and an actuator for changing the relative orientations of the reaction support vessel and the plurality of injection and evacuation fittings so as to selectively align given injection and evacuation fittings with a different one of the reaction vessels.

Claim 47 contains the same basic features of claim 1, but does not include the reaction vessels. Claim 67 contains the basic features of claim 47 but also adds more structural elements to the reaction vessel support. All independent claims, however, have the limitation of the actuator highlighted above. The Examiner did not find prior art that teaches or suggests a combination of elements that includes the actuator feature cited above. The Examiner considers the reference Zuellig to be the closest prior art.
